OBIN
Global Off-Grid Business Indicator

America
The global efforts for a reliable power supply in off-grid regions of developing countries have increased significantly in recent years. Together with the number of companies operating in this segment, the number of investors has also rapidly augmented. Data that can serve as a basis for business and investment decisions become increasingly necessary for both actors.

The collection of reliable market data for both the regions as the relevant customer groups is difficult, sometimes even impossible. Therefore and most frequently, the number published by the World Bank is repeated over and over, according to which 1.2 billion people live without access to energy. However, with this number the importance of the off-grid market is far from being gathered. Additional data can be found occasionally in studies and publications, though dispersed and not processed.

OBIN brings together information from different data sources and prepares them focused on their relevance for the off-grid market.

"OBIN America" takes account of all countries of this continent that have an electrification rate of less than 90%. The information for each country is divided into information on the off-grid market potential and the country-specific business environment.

Regarding the information on the market potential, data on mobile communication and cell phone use were also recorded because especially the mobile phones have proven to be in recent years an accelerator of the off-grid energy market. In the future, perhaps internet and consumer electronics will have an equally strong importance.

For the assessment of the "business environment", a selection of ten indicators was made, which reflect the economic conditions of aspects relevant for the off-grid business.

Neither the information on the "Business Environment" nor on the "Market potential" claim to be exhaustive or of scientific accuracy. This is not possible because of the imprecision and inhomogeneity of the sources of information.

But OBIN is a reliable and realistic indicator for the potential and the general conditions of the off-grid market in America. OBIN is especially able to demonstrate the great economic potential of this so far largely untapped market.

  1. Inefficient government bureaucracy
  2. Corruption
  3. Restrictive labor regulations
Sources and Methodology
Market size
Population living Off-Grid

Population total

Rural population
Rural population refers to people living in rural areas as defined by national statistical offices. It is calculated as the difference between total population and urban population.

Thriving / Struggling / Suffering

Population Off-Grid

Households Off-Grid + under-serviced

Kerosene lamps (glass cover, simple wick)

Mobile cellular subscriptions
Mobile cellular telephone subscriptions are subscriptions to a public mobile telephone service using cellular technology, which provide access to the public switched telephone network. Post-paid and prepaid subscriptions are included.

Internet users (per 100 people)

Market potential electrification household
Households Off-Grid and under-serviced x US$ 500 ( = Assumption: price of 12V-Solar-Home-System with 4-6 LED, possibility to connect TV, radio, fan and other 12V-devices)

Market potential replacement kerosene lamps
Kerosene lamps x US$ 30 ( = Assumption: price of a medium level mobile torch light)
Organization of the market and competition
Consists of these elements:
- Market-based competition: To what level have the fundamentals of market-based competition developed?
- Anti-monopoly policy: To what extent do safeguards exist to prevent the development of economic monoplies and cartels, and to what extent are they enforced?
- Liberalization of foreign trade: To what extent has foreign trade been liberalized?
- Banking system: To what extent have a solid banking system and a functioning capital market been established?

Independent judiciary
An independent judiciary has the ability and autonomy to
- interpret and review existing laws, legislation and policies, both public and civil
- pursue its own reasoning, free from the influence of political decision-makers or powerful groups and individuals and from corruption
- develop a differentiated organization, including legal education, jurisprudence, regulated appointment of the judiciary, rational proceedings, professionalism, channels of appeal and court administration

Property rights
"The ability to accumulate private property and wealth is understood to be a central motivating force for workers and investors in a market economy. (...) The protection of private property requires an autonomous and accountable judicial system that is available to all equally and without discrimination. The independence, transparency, and effectiveness of the judicial system have proven to be key determinants of a country’s prospects for long-term economic growth. (...) A key aspect of property rights protection is the enforcement of contracts. The voluntary undertaking of contractual obligations is the foundation of the market system and the basis for economic specialization, gains from commercial exchange, and trade among nations."

Freedom from corruption
"In the context of economic freedom, corruption can best be understood as the failure of integrity in the economic system, a distortion by which individuals or special-interest groups are able to gain at the expense of the whole. (...) Ensuring transparency is key to dealing effectively with corruption. Openness in regulatory procedures and processes can promote equitable treatment and greater efficiency."

Investment freedom
A free and open investment environment provides maximum entrepreneurial opportunities and incentives for expanded economic activity, greater productivity, and job creation. (...) An effective investment framework will be characterized by transparency and equity, supporting all types of firms rather than just large or strategically important companies, and will encourage rather than discourage innovation and competition. Restrictions on the movement of capital, both domestic and international, undermine the efficient allocation of resources and reduce productivity, distorting economic decision-making. Restrictions on cross-border investment can limit both inflows and outflows of capital, thereby shrinking markets and reducing opportunities for growth."

Availability of financial services
Does the financial sector in a country provide a wide variety of financial products and services to businesses?
Ease of access to loans
How easy is it to obtain a bank loan in a country with only a good business plan and no collateral?

Openess to multilateral trade rules

Openess to foreign participation

Efficiency of import-export procedures
Consists of:
- Efficiency of the clearance process
- Time to import (hard data)
- Documents to import (hard data)
- Cost to import (hard data)
- Time to export (hard data)
- Documents to export (hard data)
- Cost to export (hard data)

The most problematic factors for business
"This list summarizes those factors seen by business executives as the most problematic for doing business in their economy. The information is drawn from the 2013 edition of the World Economic Forum’s Executive Opinion Survey. From a list of 16 factors, respondents were asked to select the five most problematic and rank them from 1 (most problematic) to 5. The results were then tabulated and weighted according to the ranking assigned by respondents." (For OBIN we listed the three most problematic factors for business.)

Valuation
Average of all ten criteria:

<table>
<thead>
<tr>
<th>Score Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>80,1-100</td>
<td>outstanding</td>
</tr>
<tr>
<td>60,1-80,0</td>
<td>above average</td>
</tr>
<tr>
<td>40,1 - 60,0</td>
<td>average</td>
</tr>
<tr>
<td>20,1 - 40,0</td>
<td>below average</td>
</tr>
<tr>
<td>0-20,0</td>
<td>unacceptable</td>
</tr>
</tbody>
</table>

To make a valuation a minimum of five data is required (out of 10).
